

Web Technology

Javascript – Form Validation

Subin Sahayam, Assistant Professor,

Department of Computer Science and Engineering
Shiv Nadar University

Form Validation

- **Two parts**
 - **Basic Validation**
 - **Data Validation**

Form Validation

- **Two parts**
 - **Basic Validation**
 - **Mandatory Fields**
 - **Handling Non-empty**
 - **Data Validation**
 - **Handling specific patterns**
- **Can Take Place**
 - **Client-Side**
 - **Server-Side**

Form Validation

- **Client Side Form Validation**
 - **HTML**
 - **Javascript**

HTML - Form Validation

- **HTML**
 - **Forms and Input Element**
 - **HTML Constraint Validation**

HTML - Form Validation

- **HTML**
 - **Forms and Input Element**
 - **HTML Constraint Validation**
 - **HTML Input Attributes**
 - **CSS Pseudo Selectors**
 - **DOM Properties and Methods**

HTML - Form Validation

- **HTML**
 - **Forms and Input Element**
 - **HTML Constraint Validation**
 - **HTML Input Attributes**

Attribute	Description
disabled	Specifies that the input element should be disabled
max	Specifies the maximum value of an input element
min	Specifies the minimum value of an input element
pattern	Specifies the value pattern of an input element
required	Specifies that the input field requires an element
type	Specifies the type of an input element

HTML - Form Validation

- Basic Form Validation

<form>

<input type="text" name="Name" required>

<input type="submit" value="Submit">

</form>

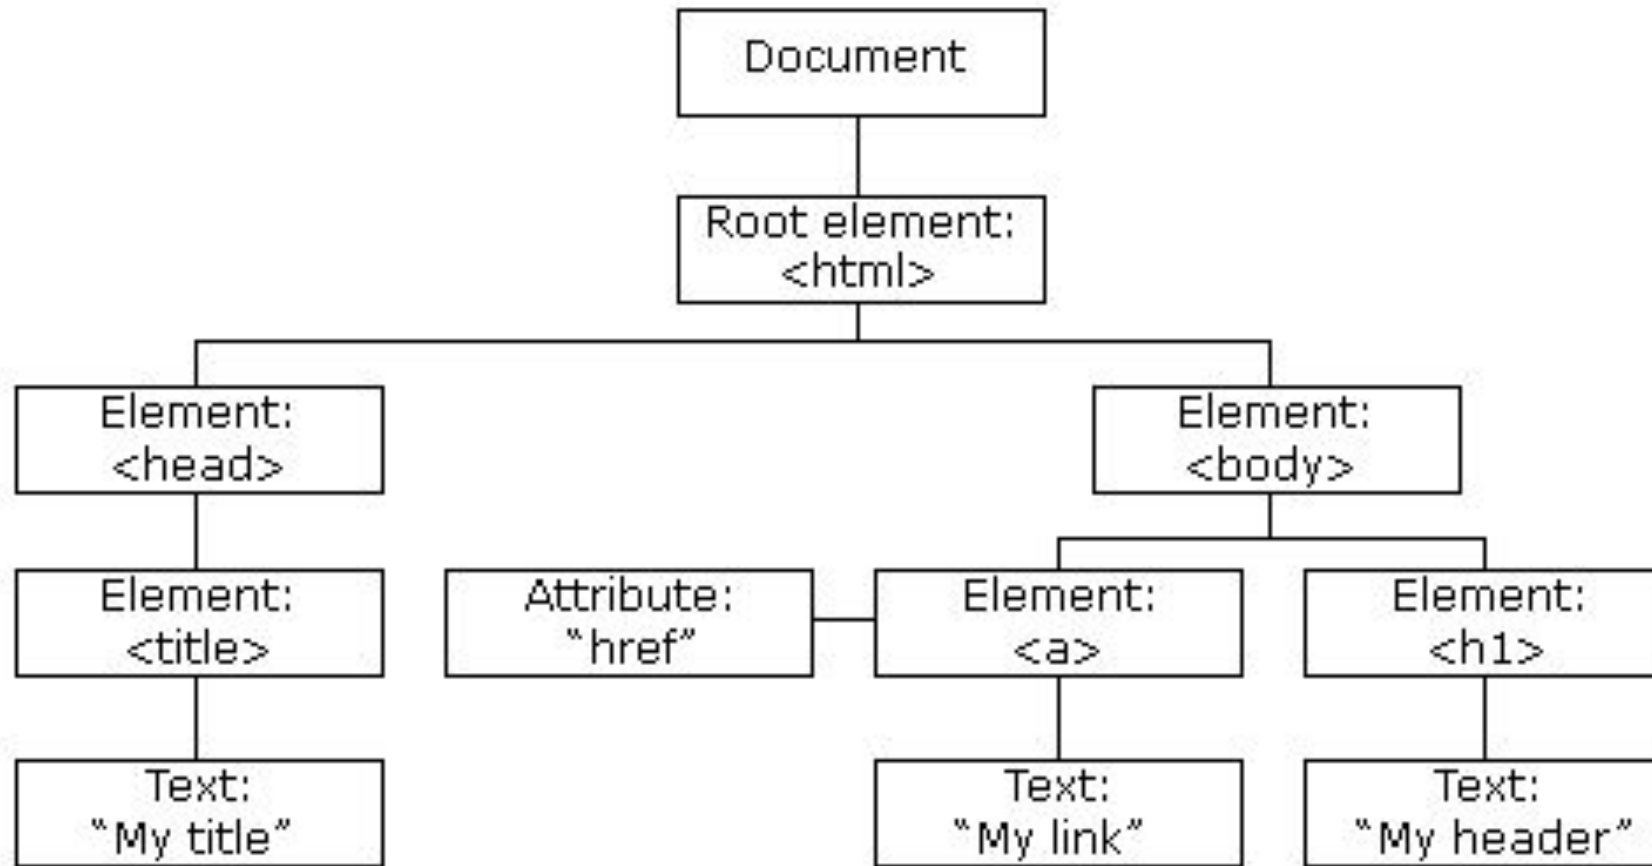

Javascript - Form Validation

- Access Elements using DOM – Run Time

```
<form onsubmit="validate()" name = "Form1" >  
  <input type="text" name="Name">  
  <input type="submit" value="Submit">  
</form>
```

```
<script>  
  function validate() {  
    }  
</script>
```

Introduction to Document Object Model (DOM)

Javascript – Form Validation

- Access Elements using DOM – Run Time

```
<form onsubmit="validate()" name = "Form1" >
```

```
<input type="text" name="Name">
```

```
<input type="submit" value="Submit">
```

```
</form>
```

```
<script>
```

```
function validate() {if( document. Form1.Name.value == "" ) {  
    alert( "Please provide your name!" );  
    document. Form1.Name.focus() ;  
    return false; }}
```

```
</script>
```

Best Practices

- 1. Use HTML tags with the same case (preferably lowercase).**
- 2. Filename to be based on functionality.**
- 3. When opening a tag, have a "tab space" for each line until you close the tag. It helps in the readability of your HTML document.**
- 4. Give a comment describing a web page as the first line of your HTML document.**
- 5. Keep HTML, CSS, and Javascript files separate.**
- 6. Give meaningful names to identifiers.**
- 7. Identifiers should not be too long or too short (min 3 character length).**
- 8. Add comments on the outermost nested control structure.**

Summary

- **Keywords Updated**
- **Form Validation Introduction**
- **HTML Form Validation**
- **Introduction DOM**
- **Javascript Form Validation**
- **Best Practices**
