

Web Technologies (CS3005)

Introduction to Web Technologies

Dr. Rourab Paul

Computer Science Department, SNU University, Chennai

What Web Technologies?

2

Web Technologies are the collection of technologies, programming languages, protocols, and tools used to create, deliver, and maintain websites and web applications over the Internet.

Room, timetable, teacher

3

□ Teacher : **Dr. Rourab Paul**

- Computer Science Department
- Web: rourab.com

AI-DS-A: <https://rourab.com/leclist.php?sub=WT&year=2026-2027&sec=IoT-A>

Email: rourabpaul@snuchennai.edu.in

- Skype: rourabpaul

□ Room and Timetable

- Theory: IoT-A 09:50 – 10:40 Monday, 245 AB3
- Theory: IoT-A 09:00 – 09:50 Tuesday, 245 AB3
- Theory: IoT-A 08:10 – 09:00 Wednesday, 245 AB3
- Lab: IoT-A 09:00 – 10:40 Wednesday, Lab 7 AB1

Evaluation Procedure

4

Theory: 100 Marks:

- End Sem (Written): 50 marks
- Mid Sem (Written): 30 Marks
- CIA : 20 Marks

Lab: 100 Marks

- CIA : 80 Marks
 - Lab Record 10 marks
 - CIA 70 Marks
- Lab Exam : 20 marks

Can You Build this?

5

How many programming languages do you think are behind these websites?

You might think:

One?

Two?

Maybe HTML?

Reality: Many technologies work together behind the scenes!

HTML
Structure

CSS
Styling

JavaScript
Interactivity

Python
Backend Logic

Node.js
Server-side

Database
Data Storage

Cloud / Servers
Deployment

Web Development is not just about writing code.

It is about bringing together **multiple technologies** to solve real-world problems!

Web Technologies

Course Road Map

6

Internet

HTML

CSS

JavaScript

DOM

HTTP

Backend

Database

Full Stack Website

Course Road Map

7

HTML: Defines the structure and content of a web page using elements like headings, paragraphs, images, and links.

CSS: Controls the appearance of a web page, including colors, fonts, spacing, layouts, and animations.

JavaScript: Adds interactivity and dynamic behavior, such as form validation, menus, animations, and real-time updates.

DOM : A programming interface that represents an HTML page as a tree, allowing JavaScript to access and modify page elements.

Course Road Map

8

HTTP : The communication protocol that enables browsers and web servers to exchange requests and responses.

Backend: The server-side logic that processes requests, handles authentication, performs computations, and communicates with databases.

Database: Stores and manages application data, such as user accounts, products, orders, and messages.

Full Stack Website : A complete web application that combines the frontend (HTML, CSS, JavaScript) with the backend and database to deliver a fully functional website.

Architecture of Web Technology

9

Thank You
